

TASK 2 — Calculator App

Introduction

This project is a simple calculator web application created using HTML5, CSS3, and JavaScript. The calculator performs basic arithmetic operations and provides a clean and user-friendly interface.

Objective

The objective of this project is to develop a functional calculator application using JavaScript for arithmetic calculations and DOM manipulation.

Technologies Used

- HTML5
- CSS3
- JavaScript ES6

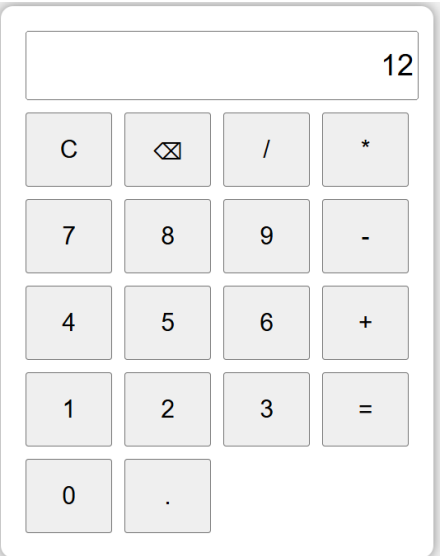

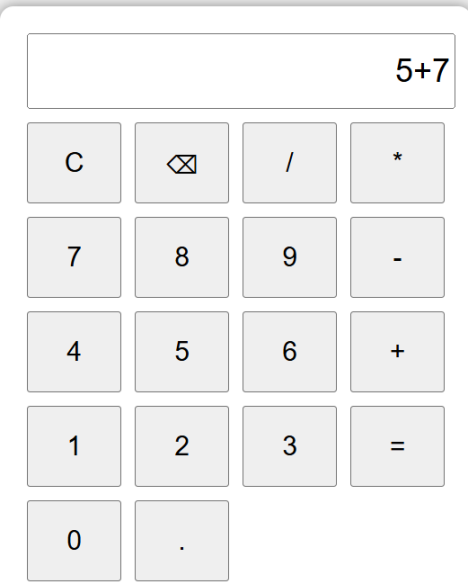

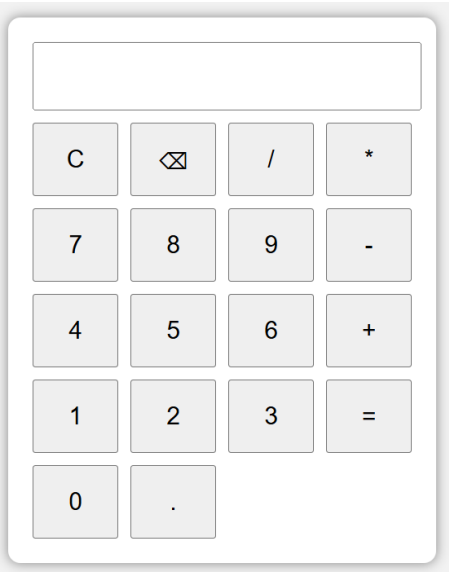

Features

- Addition operation
- Subtraction operation
- Multiplication operation
- Division operation
- Decimal support
- Backspace functionality
- Clear screen button
- Responsive calculator layout

Sample Code Snippet

```
function backspace() {  
    display.value = display.value.slice(0, -1);  
}
```
