

TASK 4 — YouTube Clone UI

Introduction

This project is a simple YouTube-inspired user interface developed using HTML5, CSS3, and JavaScript. The project focuses on creating a responsive video browsing layout similar to YouTube.

Objective

The objective of this project is to design a responsive video platform UI with search functionality and modern card-based layout using frontend technologies.

Technologies Used

- HTML5
- CSS3
- JavaScript ES6

Features

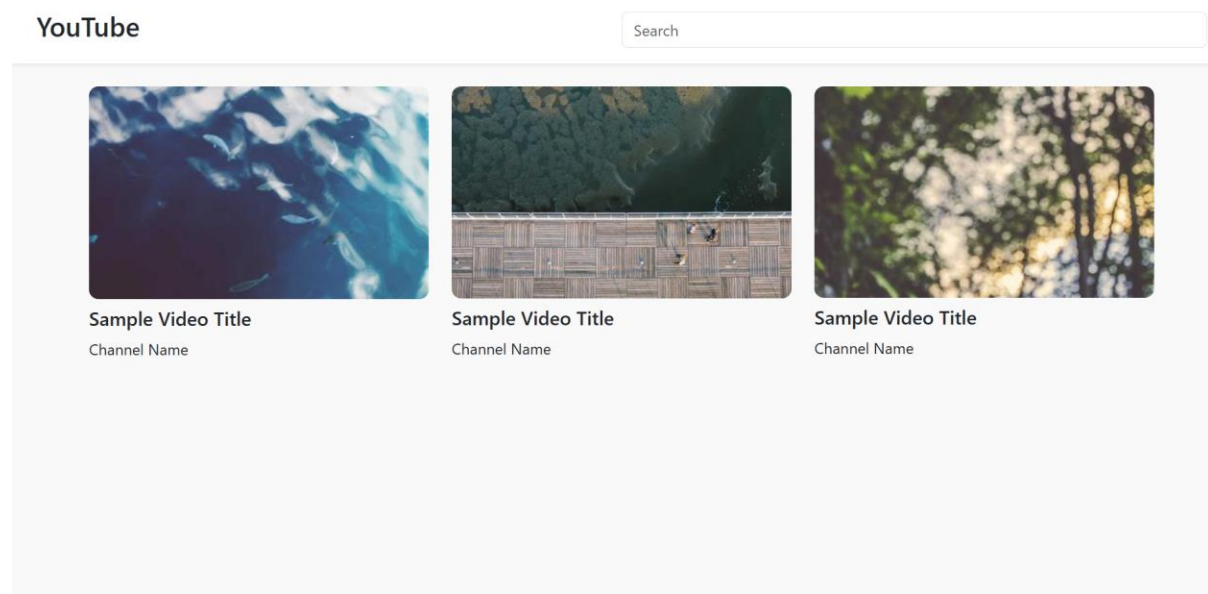

- Responsive navigation bar
- Search bar functionality
- Video card layout
- Hover effects on cards
- Responsive grid system
- Mobile-friendly design

Sample Code Snippet

```
function searchVideo() {  
    let input = document.getElementById("searchInput").value;
```

```
if(input === "") {  
    alert("Please enter something to search");  
}  
}
```
